3

4

- 1. (Currently amended) An apparatus, comprising 1 a chuck; 2 a plurality of precision ferrules, each having at least one hole therethrough; 3 a plurality of optical fibers; 4 wherein said chuck holds said precision ferrules in an array with hexagonal 5 packing and an end of each of said fibers is bonded within a respective one of said holes; 6 and 7 at least one additional ferrule having at least one hole therethrough that does not 8 have bonded therein a fiber end. 9 1 2. (Original) The invention as defined in claim 1 wherein said apparatus is 1 optically coupled to a corresponding other hexagonally packed array. 2
 - 3. (Original) The invention as defined in claim 2 wherein said other hexagonally packed array is one of the group consisting of a micro electromechanical system (MEMS) having a hexagonal array of micro mirrors, a hexagonally packed array of photo detectors, a hexagonally packed array of light sources.
- 4. (Original) The invention as defined in claim 1 wherein said chuck is fabricated to include at least one flexible member.
- (Original) The invention as defined in claim 1 wherein said holes of said
 ferrules have an average deviation from the correct positions of less than 3 μm.
- 6. (Original) The invention as defined in claim 1 wherein said holes of said
 ferrules have a collective displacement of less than 3 μm.

Serial No. 09/895,910

7. (Original) The invention as defined in claim 1 wherein said holes of said 1 2 ferrules have an average angular misorientation of 3.9 or less degrees. 8. (Original) The invention as defined in claim 1 wherein said fibers are bonded 1 within said holes using glue. 2 9. (Original) The invention as defined in claim 1 wherein said ferrules are 1 2 arranged to be perpendicular to a face of said chuck. 10. (Original) The invention as defined in claim 1 wherein said ferrules are 1 arranged at an angle to a face of said chuck. 2 11. (Original) The invention as defined in claim 1 wherein said chuck has a 1 2 hexagonal opening within which said precision ferrules are held in said array with 3 hexagonal packing. 12. (Original) The invention as defined in claim 1 wherein at least one of said 1 ferrules has an end with a conical tip. 2 13. (Original) The invention as defined in claim 1 wherein at least one hole of 1 2 said ferrules has at least one conical entrance. 14. (Original) The invention as defined in claim 1 wherein each of a subset of at 1 least two of said fibers has a terminating end that is substantially flush with one end of 2 the one of said ferrules into which said fiber is inserted, and said terminating end of all of 3 fibers said subset being substantially coplanar. 4 15. (Original) The invention as defined in claim 14 wherein at least one of said 1 fibers has a terminating end that not is substantially coplanar with said terminating ends 2 of said subset of said fibers. 3

- 1 16. (Original) The invention as defined in claim 1 wherein said precision ferrules are at least two millimeters long.
- 1 17. (Original) The invention as defined in claim 1 wherein said precision ferrules are ceramic.
- 18. (Currently amended) The invention as defined in claim 1 further comprising
 2 at least one additional ferrule wherein the hole of said at least one additional ferrule does
 3 not have an optical fiber bonded therein, wherein said hole of said at least one additional
 4 ferrule that does not have an optical fiber bonded therein being is adapted to align said
 5 apparatus to a further device to which said apparatus is coupled.
 - 19. (Currently amended) The invention as defined in claim 1 further comprising a layer of a non-rigid material interposed between said chuck and said ferrules that abut said chuck, said material being non-rigid with respect to said chuck and said ferrules [[,]].
 - 20. (Original) The invention as defined in claim 19 wherein said non-rigid material is at least one of the group consisting of plastic, polyester, polyimide.
 - 21. (Canceled)

- 22. (Original) (Currently amended) The invention as defined in claim 1 further comprising at least one additional ferrule, wherein said at least one additional ferrule containing contains an alignment member protruding therefrom.
- 1 23. (Original) The invention as defined in claim 1 further comprising a reinforcing sleeve coupled to said chuck.
- 1 24. (Original) The invention as defined in claim 1 further comprising a reinforcing sleeve integrated with said chuck.

8

ferrules.

1 2	25. (Original) The invention as defined in claim 1 further comprising glue in the interstices between said ferrules which acts to couple said ferrules to each other.
1 2	26. (Original) The invention as defined in claim 1 wherein a face of said apparatus at which said ends of said fibers protrudes is polished.
1 2	27. (Original) The invention as defined in claim 1 wherein said fibers are cleaved fibers.
1 2 3	28. (Original) The invention as defined in claim 1 wherein said chuck has mounting holes within it which are adapted for mounting said apparatus to a further device to which said apparatus is coupled.
1	29. (Currently amended) A method for making a precision fiber array, the method
2	comprising the steps of:
3	securing a plurality of precision ferrules arranged with hexagonal packing in a
4	chuck, each of said ferrules having at least one hole therethrough;
5	inserting a respective optical fiber end into the hole of each of a plurality, but less
<i>c</i>	than all of said ferrules; and

bonding each of said optical fiber ends to its respective one of said plurality of

1	30. (Currently amended) A method for making a precision fiber array, the method
2	comprising the steps of:
3	securing a plurality of precision ferrules arranged with hexagonal packing in a
4	chuck, each of said ferrules having at least one hole therethrough;
5	inserting a respective optical fiber end into the hole of each of a plurality of said
6	ferrules; and
7	bonding each of said optical fiber ends to its respective one of said plurality of
8	<u>ferrules</u> ;
9	The invention as defined in claim 29 wherein said chuck has an interior space in
10	which said ferrules are secured, said securing step further comprising the steps of:
11	heating said chuck to expand its interior space; and
12	inserting said plurality of precision ferrules within said interior space while it is at
13	least somewhat expanded as a result of said heating step.
1	31. (Original) The invention as defined in claim 30 further comprising the step of
1	bonding each of said precision ferrules to each other.
2	boliding each of said precision ferrules to each other.
1	32. (Original) The invention as defined in claim 30 further comprising the steps
2	of:
3	bonding each of said precision ferrules to each other; and
4	removing said chuck.
1	33. (Original) The invention as defined in claim 30 further comprising the step of
2	polishing said optical fiber ends.
1	34. (Original) The invention as defined in claim 30 further comprising the step of
2	aligning said optical fiber ends with an optical flat prior to performing said bonding step.
-	angining bara option from the control of the contro
1	35. (Original) The invention as defined in claim 30 further comprising the step of
2	coupling a reinforcing ring to said chuck.

1	36. (Original) The invention as defined in claim 30 further comprising the steps
2	of:
3	securing in said chuck at least one additional precision ferrule having at least one
4	hole therethrough; and
5	bonding an alignment member into said at least one hole of said at least one
6	additional ferrule so that a portion of said alignment member protrudes from said at least
7	one hole of said at least one additional ferrule.
1	37. (Original) The invention as defined in claim 30 further comprising the step of
1	
2	securing in said chuck at least one additional precision ferrule having at least one hole
3	therethrough into which one of said fiber ends is not inserted.
1	38. (Currently amended) An apparatus, comprising:
2	a plurality of precision ferrules tightly held together to form an array with
3	hexagonal packing, each of said ferrules having at least one hole therethrough; and
4	at least two optical fiber ends being bonded within the holes of respective ones of
5	said ferrules; and
6	wherein at least one hole of at least one of said precision ferrules does not have an
7	optical fiber end bonded therein.
	20 (O.: 1) The investigation of defined in plaint 20 subspacin said president
1	39. (Original) The invention as defined in claim 38 wherein said precision
2	ferrules are held together by glue.
1	40. (Original) The invention as defined in claim 38 wherein said precision
2	ferrules are held together by a chuck.
1	41. (Original) The invention as defined in claim 38 wherein said apparatus is
2	arranged so that said optical fiber ends are pointing in substantially exactly the same
3	direction.
	42 (Canceled)

43. (Currently amended) The invention as defined in claim 38 further comprising
at least one additional ferrule having at least one hole therethrough, wherein said hole of
said at least one additional ferrule that does not have an optical fiber end bonded therein
has an alignment member bonded therein and protruding therefrom so as to be adapted to
align said apparatus to a further device to which said apparatus is coupled.

- 44. (Original) The invention as defined in claim 38 further comprising at least one additional ferrule having at least one hole therethrough, wherein said hole of said at least one additional ferrule is adapted to receive an alignment member whereby said apparatus is aligned to a further device to which said apparatus is coupled.
- 45. (New) An apparatus, comprising a chuck; a plurality of precision ferrules, each having at least one hole therethrough; a plurality of optical fibers; and a layer of a non-rigid material interposed between said chuck and said ferrules that abut said chuck, said material being non-rigid with respect to said chuck and said ferrules; wherein said chuck holds said precision ferrules in an array with hexagonal packing and an end of each of said fibers is bonded within a respective one of said holes.
 - 46. (New) The invention as defined in claim 45 wherein said non-rigid material is at least one of the group consisting of plastic, polyester, polyimide.
